Calle Chaguaramos, Cruce con Av. Mohedano  
Piso 8, Ofc 8-D  
La Castellana  
Caracas 1060, VENEZUELA

Dear Luis,

I have read with great deal of interest the packet of information you sent on Expetro and I am most impressed with Jean Paul Prates credentials. He is our type of man. A hard-hitting business executive, incisive writer, articulate and high profile recognition. When you add up all these characteristics - - they spell success.

And this expertise is exactly what our company requires to do business with Petrobras in Brazil.

Pursuant to our discussion and your request of November 7, 1999, the following is an overview on Separation and Recovery Systems which provides hazardous and non-hazardous waste management, treatment and operating contract service on an international basis with a history of environmental and oil recovery and soil treatment management going back more than twenty years.

SRS is committed to the development and manufacturing of processing technologies to meet the treatment standards of its customers. In addition, the SRS processing equipment has been designed and approved to meet permitting requirements as established by the regulatory agencies.

Please forward to Jean Paul Prates the enclosed technical documentation of the SAREX Process Systems which includes:

- 1) MX-1500 Dewatering/Desludging System for three phase separation of oil, water and solids.
